STATEMENT OF WORK (SOW)

AI Automation Engineer

Company

Beyond Logix (BLX)

Role

AI Automation Engineer

Term

- **Build Phase:** 8–12 weeks

---

1. Project Objective

Design, build, and deploy a **scalable, AI-driven outbound data and sales automation system** that:

- Sources companies from ImportKey and Seamless buyer intent
- Resolves and validates company domains using LLMs
- Classifies companies by industry and likelihood to import
- Determines **primary service fit** and routes companies into the correct outbound sales motion
- Separates companies into **two distinct workflows**
- Enriches contacts and buyer intent via Seamless.ai (batch-limited)
- Executes outbound outreach in Apollo.io with **automatic sequence assignment**

- Syncs only warm, engaged leads into HubSpot using Apollo's native integration

All work product is **exclusive intellectual property of BLX**.

2. In-Scope Systems & Tools

Data Sources

- ImportKey
- Seamless.ai API
- FMCSA / DOT public data
- Google Business public listings
- Public competitor web data (Flexport, Freightos, Amazon FBA)

Sales & CRM

- Apollo.io (cold outbound, sequencing, engagement)
- HubSpot CRM (warm leads only via Apollo native integration)

AI & Automation

- OpenAI / LLM APIs (ChatGPT or equivalent)
- Python-based automation and orchestration
- Cloud hosting (AWS, GCP, or DigitalOcean)
- Proxy services for scraping stability

---

3. Scope of Work (Detailed Deliverables)

PHASE 1 — ImportKey Workflow (Workflow A)

3.1 ImportKeyBot — Data Acquisition & Filtering

- Pull ImportKey data for specified origin and U.S. ports
- Retain only **Importer = Consignee**
- Exclude intermediaries (NVOCCs, freight forwarders, brokers, 3PLs)
- Retain **all commodities**, including hazardous and regulated goods
- Enforce activity threshold (≥ 2 shipments per month)

Output: Clean list of active direct importers

3.2 DomainBot — LLM-Based Domain Discovery (Mandatory)

- Batch companies in groups of **40–50**
- Use LLMs to identify official company domains
- Validate domains using:
    - Industry alignment
    - Address matching
    - Website legitimacy checks
- Flag ambiguous results for retry or review

Output:

Company Name | Verified Domain

DomainBot is mandatory because ImportKey does not provide domains.

3.3 Company Normalization & Deduplication

- Normalize company names
- Deduplicate by domain
- Create **ImportKey Master Domain List**
- Master list acts as **suppression list** for Workflow B

3.4 AI Industry Classification

- Assign primary and secondary industries
- Generate confidence scores
- Use website content, HS codes, and metadata

3.5 AI Likelihood-to-Import Scoring

- Generate **0–100 likelihood score**
- Classify as High / Medium / Low
- Used to inform service fit and sales motion

3.6 Service Fit Determination (Mandatory)

Each company must be assigned **exactly one primary service fit**:

Primary Service Fits

- OCEAN_FREIGHT

- CUSTOMS_BROKERAGE
- DRAYAGE
- DOMESTIC_FREIGHT
- ECOMMERCE_FBA
- REGULATED_COMMODITIES

Conflict Resolution Priority

1. Regulated Commodities
2. Ecommerce / FBA
3. Ocean Freight
4. Drayage
5. Domestic Freight

Service fit is derived from:

- Shipment history and lanes
- Commodity and regulatory flags
- Industry classification
- Import-likelihood score

3.7 Account Tiering

- Assign Tier A / B / C
- Only **Tier A and Tier B** proceed to enrichment and outreach

3.8 Seamless.ai Enrichment (ImportKey Flow)

API CONSTRAINT (LOCKED)

Seamless.ai may enrich **a maximum of 20 companies per request**.

Required Implementation

- Queue-based batching (≤ 20 companies per batch)
- Throttling and retry logic
- Credit usage tracking
- Error logging and re-queueing

Actions

- Domain confirmation
- Contact lookup for decision-makers:
    - Logistics
    - Supply Chain
    - Operations
    - Import / Export
    - Procurement
    - Owner / Founder (SMBs)

3.9 Apollo Upload & Sequence Routing (ImportKey Flow)

Each company must be **automatically routed into a specific Apollo sequence based on service fit**.

Routing Map

Service Fit	Apollo Sequence
OCEAN_FREIGHT	Importer – Ocean Freight
CUSTOMS_BROKERAGE	Importer – Customs & Compliance
DRAYAGE	Importer – Port & Drayage
DOMESTIC_FREIGHT	Domestic Brokerage
ECOMMERCE_FBA	Ecommerce / Amazon FBA
REGULATED_COMMODITIES	Regulated & Compliance

Tags Applied

- SOURCE = ImportKey
- Industry
- Import Likelihood Band
- Volume Tier
- Commodity / regulatory flags

3.10 Apollo Engagement Tracking

Apollo tracks:

- Opens
- Clicks
- Replies
- Meetings booked

Apollo is the **system of record for cold outbound**.

3.11 Apollo → HubSpot Sync (Warm Leads Only)

- Use Apollo's native HubSpot integration
- Only engaged prospects sync
- HubSpot used solely for pipeline and deal management

PHASE 2 — Seamless Buyer Intent Workflow (Workflow B)

3.12 Buyer Intent Ingestion

- Pull buyer intent data **every 7 days**
- Group 24 topics into **intent buckets**

3.13 ImportKey Suppression Logic

- If domain exists in ImportKey Master Domain List:
    - Exclude from Workflow B

- Route exclusively through Workflow A

3.14 Intent Normalization & Scoring

- Normalize company and domain
- Calculate intent strength, recency, and bucket count

3.15 Industry Classification & Predictive Import Scoring

- Apply same industry classifier
- Generate predictive likelihood-to-import score

3.16 Service Fit Determination (Intent Flow)

- Assign one primary service fit using:
  - Intent bucket(s)
  - Industry
  - Website signals
  - Predictive import score
- Apply same conflict-resolution logic as Workflow A

3.17 Seamless.ai Enrichment (Intent Flow)

Same 20-company batch limit applies.

- Queue-based enrichment

- Contact lookup for decision-makers

3.18 Apollo Upload & Sequence Routing (Intent Flow)

- Route companies into Apollo sequences using **service fit**
- Apply tags:
    - SOURCE = SeamlessIntent
    - Intent bucket(s)
    - Intent strength
    - Intent recency
    - Industry
    - Import Likelihood Band

3.19 Apollo Engagement & HubSpot Sync

- Same engagement and sync rules as Workflow A
- HubSpot remains warm-lead-only

---

4. Infrastructure, Reliability & Governance

4.1 Automation Infrastructure

- Cloud deployment
- Scheduling (cron / workers)
- Logging and monitoring

- Error handling and retries

4.2 Seamless Credit & Rate-Limit Safeguards

- Enforce 20-company batch limit
- Track credits in real time
- Cache enrichment results
- Pause processing if limits approached

---

5. Explicitly Out of Scope

- Manual sales outreach
- Custom HubSpot API development
- Paid third-party scraping SaaS tools
- Front-end UI development
- CRM logic beyond Apollo native integration

---

6. Deliverables

- Full source code (BLX-owned)
- Configuration files
- Technical documentation

- Knowledge-transfer walkthrough
- Ability for BLX to operate system independently

7. Timeline & Milestones

Milestone	Target
Architecture & setup	Week 1
ImportKeyBot + DomainBot	Weeks 2–3
AI models & service-fit logic	Weeks 4–5
Seamless batching & Apollo routing	Weeks 6–7
Intent workflow & suppression	Weeks 8–9
Stabilization & handoff	Weeks 10–12

8. Compensation

- **Build Phase:** $5,000–$10,000
- **Maintenance (Optional):** $500–$1,500/month

9. IP & Confidentiality

- All work product is BLX intellectual property
- NDA required
- No reuse or resale of code or logic

---

10. Acceptance Criteria

- Two workflows operate independently
- DomainBot resolves domains accurately
- Seamless enrichment never exceeds 20 companies per batch
- Weekly buyer intent refresh runs without overages
- **Every company is routed into exactly one Apollo sequence based on service fit**
- HubSpot contains only warm leads

Executive One-Line Summary

This SOW defines the build of a two-workflow, AI-driven outbound system that automatically routes every company into the correct Apollo sequence based on service fit, using LLM-powered domain discovery, Seamless enrichment, and Apollo-first outreach.
